CSI Achieves

InfoComm Diamond Level Designation

ALLENTOWN, PA – February 26, 2010 – [Communication Systems, Inc. \(CSI\)](#) of Allentown has qualified as a 2010 [InfoComm International](#) “Diamond Audiovisual Solutions Provider”. This designation is the highest attainable from the world’s foremost audiovisual trade organization; it recognizes the percentage of the company’s audiovisual sales, customer service and technical staff who have achieved and maintained individual InfoComm “Certified Technology Specialist” (CTS) Certification.

“This is a particularly remarkable accomplishment considering CSI’s diverse product offering, the fact that we just moved to a new facility and added about 20% to our workforce this year”, according to Wayne Becker, CSI VP of Business Development. In addition to audiovisual systems, CSI engineers, installs and services life safety and security systems, telephone systems, and surveillance systems, as well as wired and wireless IT networks. CSI is a family owned business celebrating its 35th Anniversary this year, and its new 14,000 square foot headquarters is a showcase of the technologies that they provide and support.

The CTS certification the only audiovisual certification program accredited by the International Organization for Standardization's (ISO) United States representative, and the American National Standards Institute (ANSI). The company-level Diamond Level Designation recognizes professionalism and expertise achieved through professional development, training, and commitment to the certification of employees.

InfoComm awards individual CTS Certification to audiovisual professionals who have demonstrated knowledge and comprehension of the science and technology used in communications including audio, video, display and systems. Technicians, engineers, designers, salespeople, customer service personnel, managers and executives are eligible to take the individual certification test.
